„UNE SOLUTION GLOBALE“ – A HOLISTIC SOLUTION WITH BASS AND PRONIC
 Successful cost-cutting and lead time reduction in sheet metal working

With the introduction of the lightweight construction in production, sheet metals are conquering more and more products. Thus, the logical consequence is that sheet metal working is of increased importance. The formed, thin-walled sheet metal parts are normally screwed together with other components.

In order to realise this, an internal thread directly cut into the sheet metal, is an environmentally-friendly and cost-effective option. Without any further work processes, the thread can directly be integrated by means of thread tap entities for example in presses.

For a long time now, we have been working together with PRONIC, the specialist for thread tap entities from France, to always provide the best processes for the user. This long-term partnership is now bearing new fruit. As of now, you can purchase roll tap entities from PRONIC and the compatible BASS roll taps of the latest generation with internal cooling for the use under minimum quantity lubrication (MQL).

Your advantages at a glance

- Reduction of lubricants
- Constant lubricating film, also in deep thread holes
- Less staining of the parts, thus less effort for cleaning
- A better lubrication = sustainable increase in performance
- Increased tool life of the roll taps
- Increased process security
- Stock availability also in tolerance 6GX, 7GX and further measurements

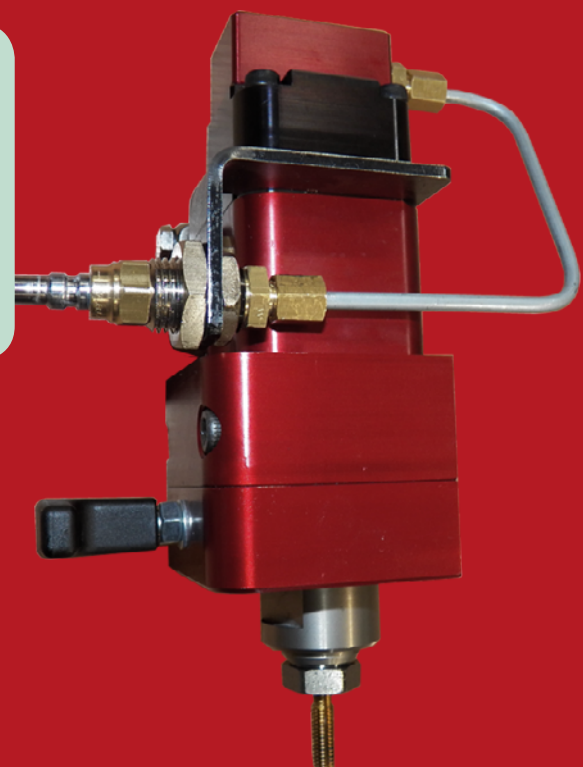

The performance of our roll taps has again increased through constant developments. Use our latest product developments for your PRONIC-entities now as well. Benefit from the increased tool life of our next-generation roll taps with BT-coating for a long endurance.

PRONIC and BASS – a perfectly harmonized team – a holistic solution for your process.

NEW WEBSITE ONLINE

Four years ago, we were able to proudly present our new web presence. A lot has changed since then.

While in 2012, nearly all of our homepage visitors sat in front of a computer screen, the quota of accesses via smartphones and tablets has rapidly increased by now.

Therefore, we have updated our website which is responsive now – and adapts to your device dynamically.

But no matter via which device you access www.bass-tools.com we are happy to have you as our visitor to our website.

BASS GETS FUTURE PRIZE 2016

For the third consecutive year now, the Main-Tauber-Kreis, the home region of BASS, has awarded the Future Prize. In 2016, we were nominated for the category “Apprenticeship – career at home”, competing with notable companies. Our efforts in terms of apprenticeship and our practiced human resources policy “The people are in the focus” were honored with the 3rd prize.

The jurors of the regional business development were especially convinced and rather impressed by the intensive mentoring of the vocational trainees and the coherent overall concept to integrate apprentices in the company from the very first day.
